**Product Name:** Foot & Leg Warmer

**Description:** A sock or stocking made of vinyl latex or an elastic material, perforated or non-perforated. The sock or stocking is made to fit the foot or leg the same as a surgeon's glove fits his hand. The sock or stocking is worn under other socks or ladies stockings/nylons to keep the feet or legs warm in winter weather. The thickness would determine the warmth. Size and color would vary. A sock or stocking could also be lined with a molded latex or vinyl material perforated or non-perforated which would be washable and useable again.

**Features & Benefits:** Sock or stocking can be made in various colors as to make the legs appear tan in the winter. They can also be perforated to allow heat to escape in mild climates or without perforation in very cold climates. The general public, nursing homes and hospitals would benefit from this product.

Sock or stocking can be made with an arch support built in and/or a bunion support built in. Sock or stocking can be made with or without toes.
